Stephen Westland, Caterina Ripamonti, Vien Cheung

Computational Colour Science Using MATLAB (The Wiley-IS&T Series in Imaging Science and Technology) Stephen Westland, Caterina Ripamonti, Vien Cheung

Computational Colour Science Using MATLAB 2nd Edition offers a practical, problem-based approach to colour physics. The book focuses on the key issues encountered in modern colour engineering, including efficient representation of colour information, Fourier analysis of reflectance spectra and advanced colorimetric computation. Emphasis is placed on the practical applications rather than the techniques themselves, with material structured around key topics. These topics include colour calibration of visual displays, computer recipe prediction and models for colour-appearance prediction.

Each topic is carefully introduced at three levels to aid student understanding. First, theoretical ideas and background information are discussed, then explanations of mathematical solutions follow and finally practical solutions are presented using MATLAB. The content includes:

- A compendium of equations and numerical data required by the modern colour and imaging scientist.
- Numerous examples of solutions and algorithms for a wide-range of computational problems in colour science.
- Example scripts using the MATLAB programming language.

This 2nd edition contains substantial new and revised material, including three innovative chapters on colour imaging, psychophysical methods, and physiological colour spaces; the MATLAB toolbox has been extended with a professional, optimized, toolbox to go alongside the current teaching toolbox; and a java toolbox has been added which will interest users who are writing web applications and/or applets or mobile phone applications.

Computational Colour Science Using MATLAB 2nd Edition is an invaluable resource for students taking courses in colour science, colour chemistry and colour physics as well as technicians and researchers working in the area. In addition, it acts a useful reference for professionals and researchers working in colour dependent industries such as textiles, paints, print & electronic imaging.

Review from First Edition:

“...highly recommended as a concise introduction to the practicalities of colour science...” (Color Technology, 2004)

From reader reviews:

Robert Gibson:

The ability that you get from Computational Colour Science Using MATLAB (The Wiley-IS&T Series in Imaging Science and Technology) will be the more deep you looking the information that hide within the words the more you get serious about reading it. It does not mean that this book is hard to comprehend but Computational Colour Science Using MATLAB (The Wiley-IS&T Series in Imaging Science and Technology) giving you enjoyment feeling of reading. The article writer conveys their point in a number of way that can be understood by simply anyone who read the idea because the author of this reserve is well-known enough. This kind of book also makes your own vocabulary increase well. Making it easy to understand then can go together with you, both in printed or e-book style are available. We advise you for having that Computational Colour Science Using MATLAB (The Wiley-IS&T Series in Imaging Science and Technology) instantly.

Dorothy Roper:

This book untitled Computational Colour Science Using MATLAB (The Wiley-IS&T Series in Imaging Science and Technology) to be one of several books that best seller in this year, that's because when you read this book you can get a lot of benefit upon it. You will easily to buy that book in the book shop or you can order it by using online. The publisher of the book sells the e-book too. It makes you quicker to read this book, since you can read this book in your Smartphone. So there is no reason to you to past this publication from your list.

Maria Green:

People live in this new day time of lifestyle always try and and must have the extra time or they will get great deal of stress from both way of life and work. So , whenever we ask do people have time, we will say absolutely yes. People is human not really a robot. Then we question again, what kind of activity do you possess when the spare time coming to you of course your answer can unlimited right. Then do you ever try this one, reading guides. It can be your alternative in spending your spare time, typically the book you have read will be Computational Colour Science Using MATLAB (The Wiley-IS&T Series in Imaging Science and Technology).

Susan Ross:

Reading a book to become new life style in this calendar year; every people loves to learn a book. When you examine a book you can get a lots of benefit. When you read textbooks, you can improve your knowledge, due to the fact book has a lot of information into it. The information that you will get depend on what kinds of book that you have read. If you would like get information about your examine, you can read education books, but if you act like you want to entertain yourself you are able to a fiction books, these us novel, comics, as well as soon. The Computational Colour Science Using MATLAB (The Wiley-IS&T Series in

Imaging Science and Technology) will give you new experience in looking at a book.
