**The new text-book of physics; An elementary course in natural philosophy** Le Roy Clark Cooley

This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1880 edition. Excerpt: ... The Boiling Point depends on the Purity of the Liquid.--It is affected, first, by the presence of impurities in the liquid. The presence of some impurities raises the boiling point; of others, lowers it. Salt water, for example, boils at a higher temperature than pure water, while that which contains air boils at a much lower temperature than that which contains none. It depends on the Nature of the Vessel.--In an iron vessel, water will boil at a lower temperature than in one of glass. It is so because there is a stronger adhesion between water and glass than between water and iron. The stronger adhesion requires a stronger heat to overcome it. It depends on the Pressure.--But the most important circumstance on which the boiling point of a liquid depends is the pressure it sustains. This pressure is due to the atmosphere, to the weight of the liquid itself, and to any force which may be brought to bear upon it by artificial means. Whatever, may be its cause, the effect of pressure is to raise the boiling point. It is well known that water boils at a lower temperature on the top of a mountain than at its base. It does so because the pressure of the air upon it is less. This very important principle may be easily illustrated by experiment. For this purpose take a glass flask, or, better, a bolt head (Fig. 65), and put into it water enough to fill the stem and a small part of the bulb. Invert it so that the water may be boiled by holding the bulb over the flame of a lamp. Boil it until the steam issues freely from the stem, and then, removing it from the flame, cork the stem at the same instant. The air has been driven out from the instrument, and nothing remains, to press upon the water, but steam. Turn the bulb upward so that the water...

### **From reader reviews:**

#### **Tracy McCulloch:**

Book is to be different for each and every grade. Book for children until adult are different content. As you may know that book is very important for all of us. The book The new text-book of physics; An elementary course in natural philosophy ended up being making you to know about other expertise and of course you can take more information. It is extremely advantages for you. The e-book The new text-book of physics; An elementary course in natural philosophy is not only giving you more new information but also to get your friend when you experience bored. You can spend your current spend time to read your reserve. Try to make relationship with all the book The new text-book of physics; An elementary course in natural philosophy. You never really feel lose out for everything in case you read some books.

#### **Mark Giordano:**

This book untitled The new text-book of physics; An elementary course in natural philosophy to be one of several books that will best seller in this year, honestly, that is because when you read this publication you can get a lot of benefit onto it. You will easily to buy that book in the book shop or you can order it via online. The publisher of this book sells the e-book too. It makes you more readily to read this book, as you can read this book in your Smart phone. So there is no reason for you to past this reserve from your list.

#### **Andrew Evans:**

Playing with family in a very park, coming to see the marine world or hanging out with close friends is thing that usually you will have done when you have spare time, and then why you don't try matter that really opposite from that. One activity that make you not experience tired but still relaxing, trilling like on roller coaster you are ride on and with addition of information. Even you love The new text-book of physics; An elementary course in natural philosophy, you could enjoy both. It is very good combination right, you still desire to miss it? What kind of hang-out type is it? Oh seriously its mind hangout men. What? Still don't understand it, oh come on its identified as reading friends.

#### **Peter Barba:**

This The new text-book of physics; An elementary course in natural philosophy is great book for you because the content which can be full of information for you who have always deal with world and also have to make decision every minute. That book reveal it details accurately using great arrange word or we can point out no rambling sentences inside it. So if you are read that hurriedly you can have whole details in it. Doesn't mean it only provides you with straight forward sentences but challenging core information with beautiful delivering sentences. Having The new text-book of physics; An elementary course in natural philosophy in your hand like keeping the world in your arm, info in it is not ridiculous a single. We can say that no guide that offer you world inside ten or fifteen tiny right but this reserve already do that. So , this is certainly good reading book. Hi Mr. and Mrs. busy do you still doubt that?
