Geometric Algorithms and Combinatorial Optimization (Algorithms and Combinatorics)

Martin Grötschel, Laszlo Lovasz, Alexander Schrijver

Geometric Algorithms and Combinatorial Optimization (Algorithms and Combinatorics) Martin Grötschel, Laszlo Lovasz, Alexander Schrijver

Since the publication of the first edition of our book, geometric algorithms and combinatorial optimization have kept growing at the same fast pace as before. Nevertheless, we do not feel that the ongoing research has made this book outdated. Rather, it seems that many of the new results build on the models, algorithms, and theorems presented here. For instance, the celebrated Dyer-Frieze-Kannan algorithm for approximating the volume of a convex body is based on the oracle model of convex bodies and uses the ellipsoid method as a preprocessing technique. The polynomial time equivalence of optimization, separation, and membership has become a commonly employed tool in the study of the complexity of combinatorial optimization problems and in the newly developing field of computational convexity. Implementations of the basis reduction algorithm can be found in various computer algebra software systems. On the other hand, several of the open problems discussed in the first edition are still unsolved. For example, there are still no combinatorial polynomial time algorithms known for minimizing a submodular function or finding a maximum clique in a perfect graph. Moreover, despite the success of the interior point methods for the solution of explicitly given linear programs there is still no method known that solves implicitly given linear programs, such as those described in this book, and that is both practically and theoretically efficient. In particular, it is not known how to adapt interior point methods to such linear programs.

From reader reviews:

Carol McElroy:

Spent a free time for you to be fun activity to do! A lot of people spent their free time with their family, or all their friends. Usually they doing activity like watching television, likely to beach, or picnic inside the park. They actually doing same thing every week. Do you feel it? Would you like to something different to fill your own free time/ holiday? Could possibly be reading a book can be option to fill your free time/ holiday. The first thing you ask may be what kinds of book that you should read. If you want to consider look for book, may be the book untitled Geometric Algorithms and Combinatorial Optimization (Algorithms and Combinatorics) can be very good book to read. May be it is usually best activity to you.

Ann Edwards:

You may spend your free time to study this book this e-book. This Geometric Algorithms and Combinatorial Optimization (Algorithms and Combinatorics) is simple to develop you can read it in the area, in the beach, train and also soon. If you did not get much space to bring typically the printed book, you can buy the actual e-book. It is make you quicker to read it. You can save typically the book in your smart phone. So there are a lot of benefits that you will get when one buys this book.

Carla Floyd:

Don't be worry in case you are afraid that this book may filled the space in your house, you can have it in e-book technique, more simple and reachable. This Geometric Algorithms and Combinatorial Optimization (Algorithms and Combinatorics) can give you a lot of buddies because by you checking out this one book you have issue that they don't and make a person more like an interesting person. This book can be one of one step for you to get success. This guide offer you information that might be your friend doesn't realize, by knowing more than additional make you to be great people. So , why hesitate? Let's have Geometric Algorithms and Combinatorial Optimization (Algorithms and Combinatorics).

Dianne Haire:

As a college student exactly feel bored to be able to reading. If their teacher questioned them to go to the library or to make summary for some book, they are complained. Just small students that has reading's internal or real their interest. They just do what the teacher want, like asked to go to the library. They go to generally there but nothing reading critically. Any students feel that reading through is not important, boring and can't see colorful pictures on there. Yeah, it is to become complicated. Book is very important for yourself. As we know that on this period, many ways to get whatever we really wish for. Likewise word says, many ways to reach Chinese's country. Therefore , this Geometric Algorithms and Combinatorial Optimization (Algorithms and Combinatorics) can make you feel more interested to read.
