The discovery by Green and Schwarz in 1984 that ten-dimensional superstring theory is anomaly-free and finite only if the Yang-Mills gauge group is  $SO(32)$  or  $E_8 \times E_8$  has made the phenomenological possibilities of superstrings evident. This has resulted in a sudden surge of interest in superstrings unification. Since this fast-developing field is new to almost all theoretical physicist, this collection of basic pre-1985 references should be very valuable. This two volumes contain over 1000 pages of reprints plus some introductory comments by J Schwarz. Contents: "Volume 1: "Review of Bosonic Strings The Original Papers No-ghost Theorems and Determination of  $D=10$  Fermion-Emission Vertex and Fermion-Fermion Scattering Transition from Hadrons to Elementary Particles World-sheet Supersymmetry, Space-time Supersymmetry Development of Superstring Formalism Review Papers" Volume 2: "Field Theory of Strings Superstring Field Theory Anomaly and Infinity Cancellations Phenomenology Begins Readership: Upper level undergraduates, graduate students, lecturers and researchers in theoretical physics, mathematical physics and superstring theory.
