Quantification in Signal Processing for Magnetic Resonance Spectroscopy (Series in Atomic Molecular Physics)

Dzevad Belkic, Karen Belkic

Quantification in Signal Processing for Magnetic Resonance Spectroscopy (Series in Atomic Molecular Physics) Dzevad Belkic, Karen Belkic

This interdisciplinary book simultaneously deals with three selected fields. Specifically, it presents a joint framework with the unified quantum-mechanical theories of resonant scattering, spectroscopy, and signal processing. Both the standard and non-standard analyses are expounded by encompassing the key ingredient of the S- and R-matrices, variational principles, complex coordinate scaling, wave packet propagation, Fredholm determinants, finite-rank separable expansions, filter diagonalization, the Lanczos algorithm, and the Padé methodology.

The highly developed mathematical theory of rational functions with the traditional Padé approximant as the leading proponent is advantageously exploited. Remarkably, this single strategy can be efficiently employed for vastly different tasks, ranging from optimal solutions of the major quantum-mechanical enquiry—the eigenvalue problems for determining the state and structure of the investigated generic systems via acceleration of slowly converging series—to powerful transformations of divergent into convergent perturbation expansions in a variety of applications. Moreover, accuracy, stability, and robustness put the Padé method at the forefront of the multitude of the existing solvers of the so-called inverse mathematically ill-conditioned problems.

The analyzed theoretical formalism is mathematically and physically rigorous with the added value for wide, practical applications. It can be used with equal or comparable success in optimally quantifying resonances in physics, chemistry, biology, and medical diagnostics as well as in the applied area of signal processing. The overall scope and structure of this book is systematically and methodologically presented in a way to be maximally suitable for graduate students and researchers in the above-mentioned basic and applied sciences.

From reader reviews:

Bernard McLaren:

Have you spare time to get a day? What do you do when you have more or little spare time? Yes, you can choose the suitable activity with regard to spend your time. Any person spent their own spare time to take a stroll, shopping, or went to the particular Mall. How about open or even read a book entitled Quantification in Signal Processing for Magnetic Resonance Spectroscopy (Series in Atomic Molecular Physics)? Maybe it is for being best activity for you. You know beside you can spend your time together with your favorite's book, you can smarter than before. Do you agree with their opinion or you have other opinion?

Nancy Samuel:

In this 21st hundred years, people become competitive in every single way. By being competitive now, people have do something to make these individuals survives, being in the middle of typically the crowded place and notice through surrounding. One thing that occasionally many people have underestimated the item for a while is reading. Yep, by reading a reserve your ability to survive boost then having chance to stand than other is high. In your case who want to start reading some sort of book, we give you this Quantification in Signal Processing for Magnetic Resonance Spectroscopy (Series in Atomic Molecular Physics) book as basic and daily reading reserve. Why, because this book is usually more than just a book.

Juan Gilbert:

This book untitled Quantification in Signal Processing for Magnetic Resonance Spectroscopy (Series in Atomic Molecular Physics) to be one of several books which best seller in this year, that is because when you read this book you can get a lot of benefit on it. You will easily to buy that book in the book retailer or you can order it by using online. The publisher of the book sells the e-book too. It makes you easier to read this book, since you can read this book in your Smartphone. So there is no reason to you personally to past this reserve from your list.

Gloria Lafreniere:

A lot of people always spent their very own free time to vacation or go to the outside with them family or their friend. Did you know? Many a lot of people spent many people free time just watching TV, or playing video games all day long. If you would like try to find a new activity honestly, that is look different you can read a book. It is really fun for you personally. If you enjoy the book that you simply read you can spent the whole day to reading a e-book. The book Quantification in Signal Processing for Magnetic Resonance Spectroscopy (Series in Atomic Molecular Physics) it is quite good to read. There are a lot of folks that recommended this book. These folks were enjoying reading this book. Should you did not have enough space to bring this book you can buy the actual e-book. You can m0ore simply to read this book from a smart phone. The price is not to cover but this book has high quality.
